

# **Lecture 4**

# **Machine Learning Basic**

**Jaeyun Kang**

# Artificial Intelligence

WHAT IS  
A.I.?

# Artificial Intelligence

A.I. ?

“인간같이 생각하고 판단할 수 있는 컴퓨터”

그러나 컴퓨터는  
기본적으로..

# Artificial Intelligence

A.I. ?

“인간같이 생각하고 판단할 수 있는 컴퓨터”

그러나 컴퓨터는  
기본적으로..

인간에 비해 높은 연산능력  
복잡한 계산을 빠르게 처리

# Artificial Intelligence

A.I. ?

“인간같이 생각하고 판단할 수 있는 컴퓨터”

그러나 컴퓨터는  
기본적으로..

인간에 비해 높은 연산능력  
복잡한 계산을 빠르게 처리

인간에 비해 낮은 인지능력  
개와 고양이 구분도 못한다!

# Artificial Intelligence

아직 갈 길이 먼 A.I.

이상

현실

# 과거의 AI: Rule-Based AI

개	고양이
귀가 쳐져있다	귀가 뽕족하다
눈매가 착하다	눈매가 매섭다
덩치가 크다	덩치가 작다

컴퓨터가 개와 고양이 사진을 구분하기 위해 필요한  
'규칙' 혹은 '패턴'을 직접 제시!

# 과거의 AI: Rule-Based AI

# 과거의 AI: Rule-Based AI

눈매가 착하다? 매섭다?  
덩치가 작다? 크다?  
귀가 뽕족하다? 쳐져있다?

# 과거의 AI: Rule-Based AI

**Rule-Based AI의 한계: 모든 규칙을 우리가 직접 정해줄 수 없다!**

# 과거의 AI: Rule-Based AI

**컴퓨터에게 수 많은 개와 고양이 사진을 보여주고  
컴퓨터 스스로 그 규칙을 찾아나가게 하자!**

Data-Based AI

# 현재의 AI: Data-Based AI

**'데이터'를 많이 제공하여 컴퓨터가 '스스로' 규칙을 배우도록 하자**

**Data-Based AI**

# 현재의 AI: Data-Based AI

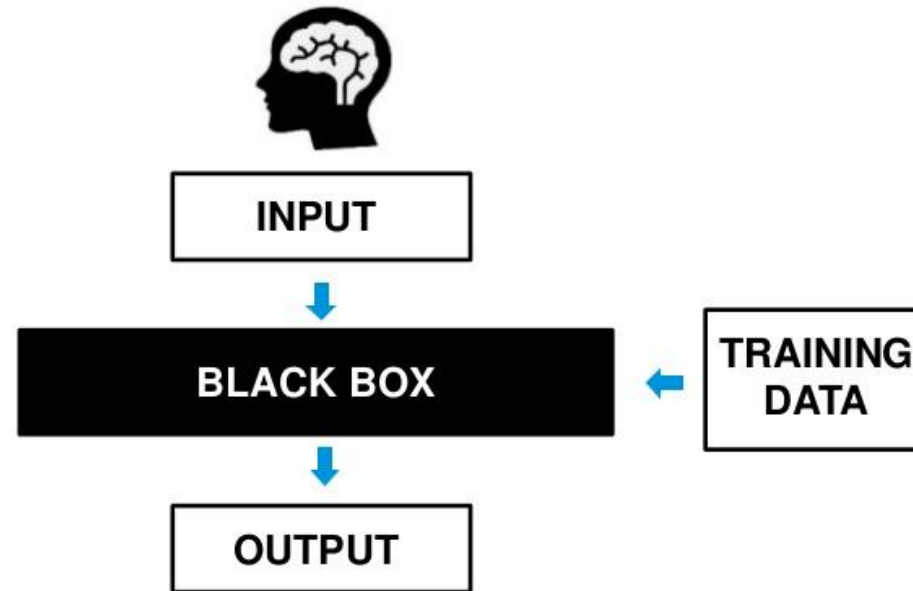

**'데이터'를 많이 제공하여 컴퓨터가 '스스로' 규칙을 배우도록 하자**

**Data-Based AI = Machine Learning**

# Machine Learning 의 원리

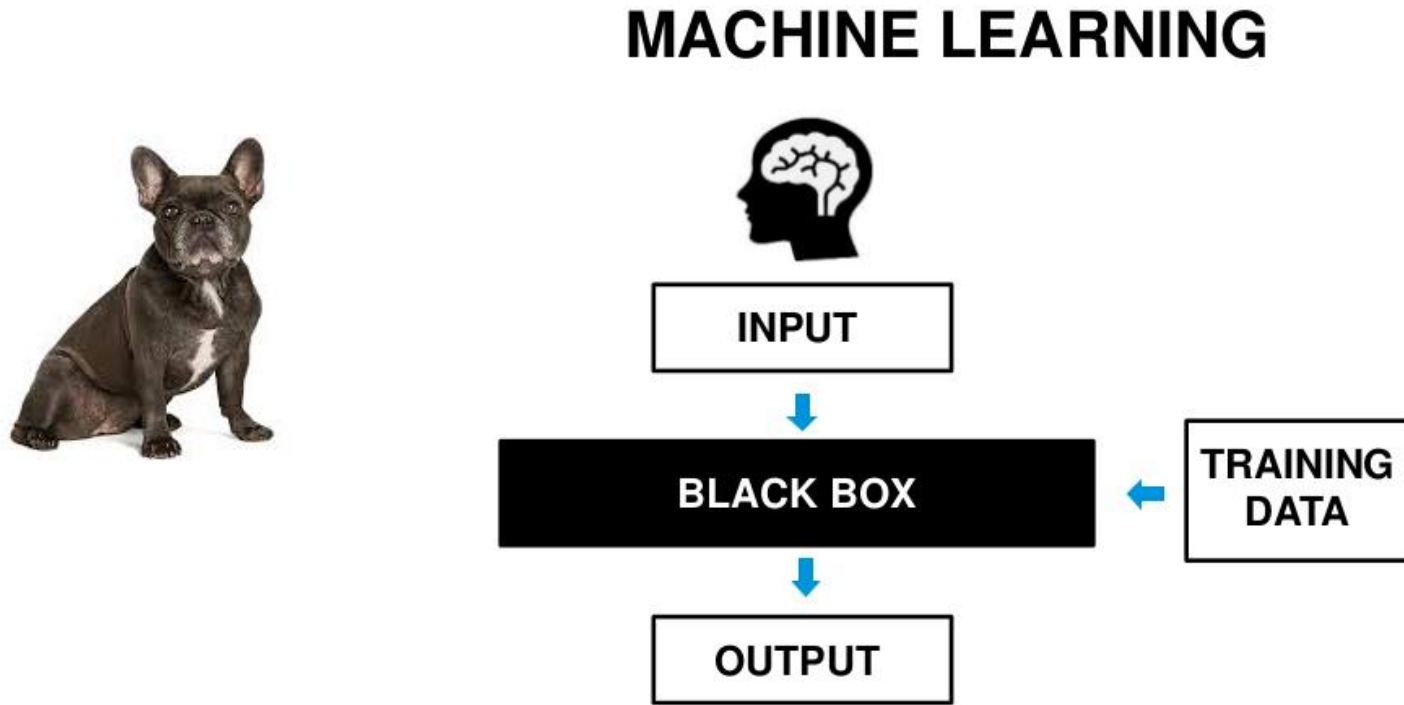

## MACHINE LEARNING

<http://www.slideshare.net/AlexPoon1>

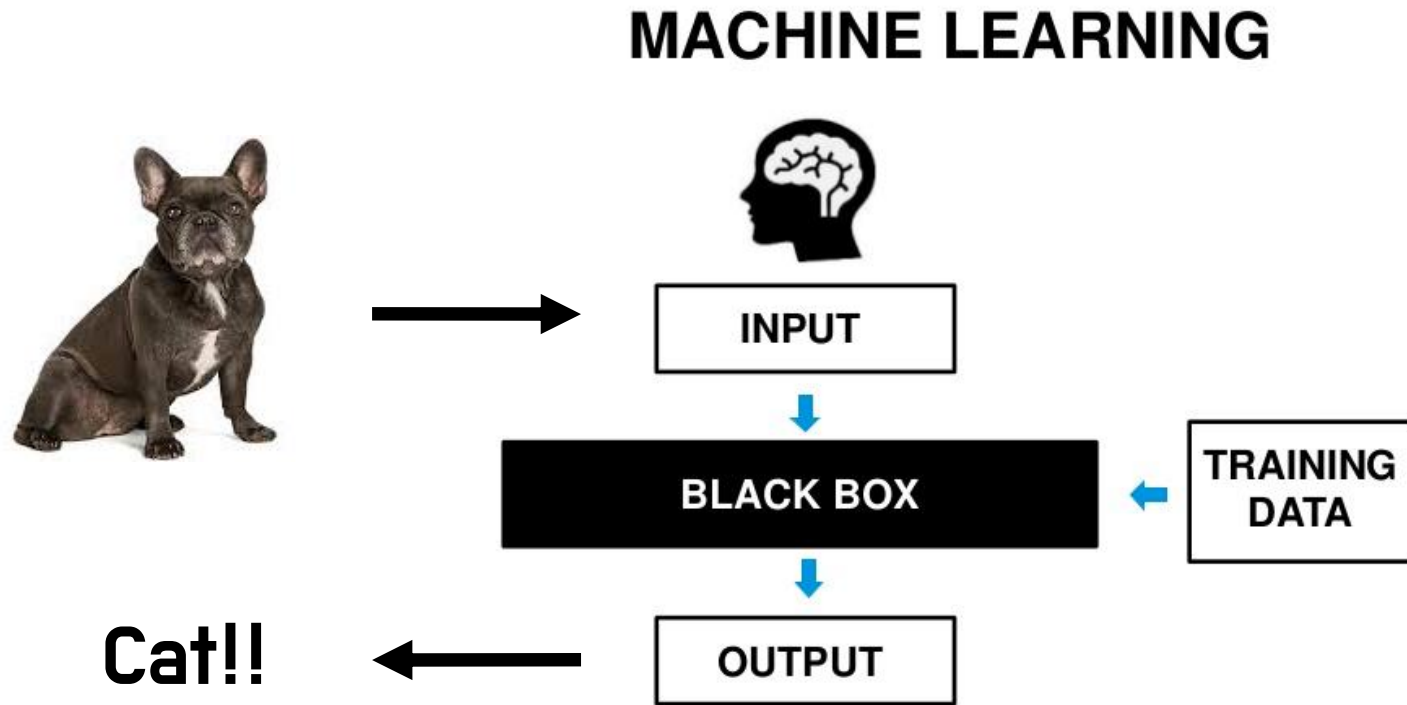

# Machine Learning 의 원리

<http://www.slideshare.net/AlexPoon1>

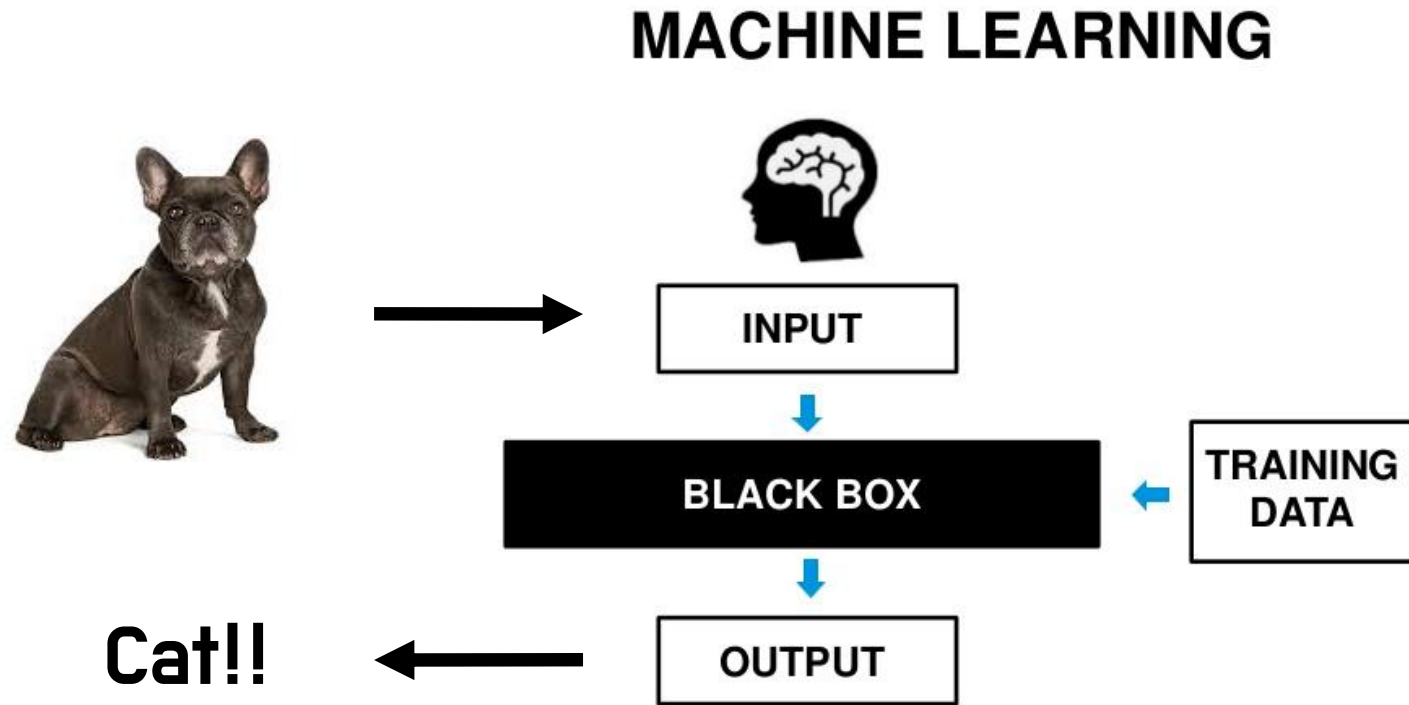

목표: 개와 고양이를 구분하는 A.I. Black Box!

# Machine Learning 의 원리

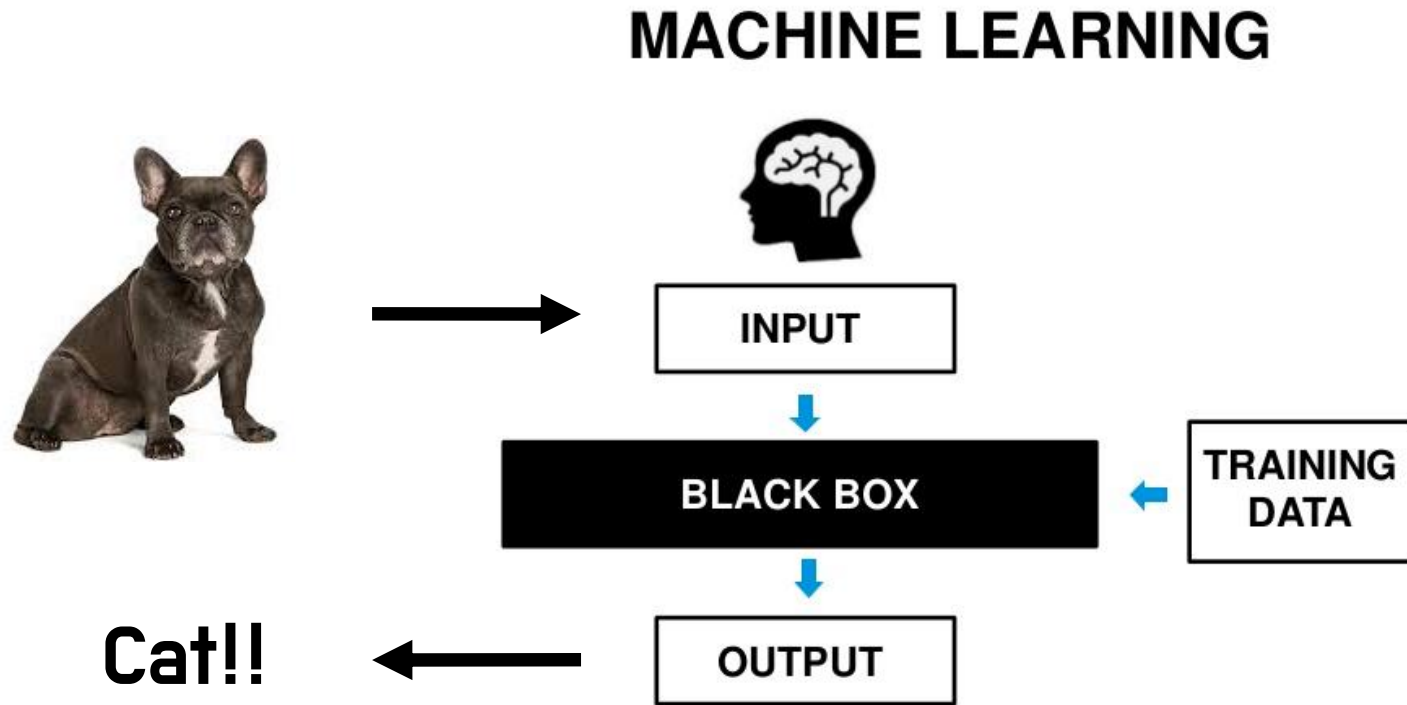

# Machine Learning 의 원리

문제: Black Box가 개와 고양이를 구분하는 '규칙'을 알지 못한다!

# Machine Learning 의 원리

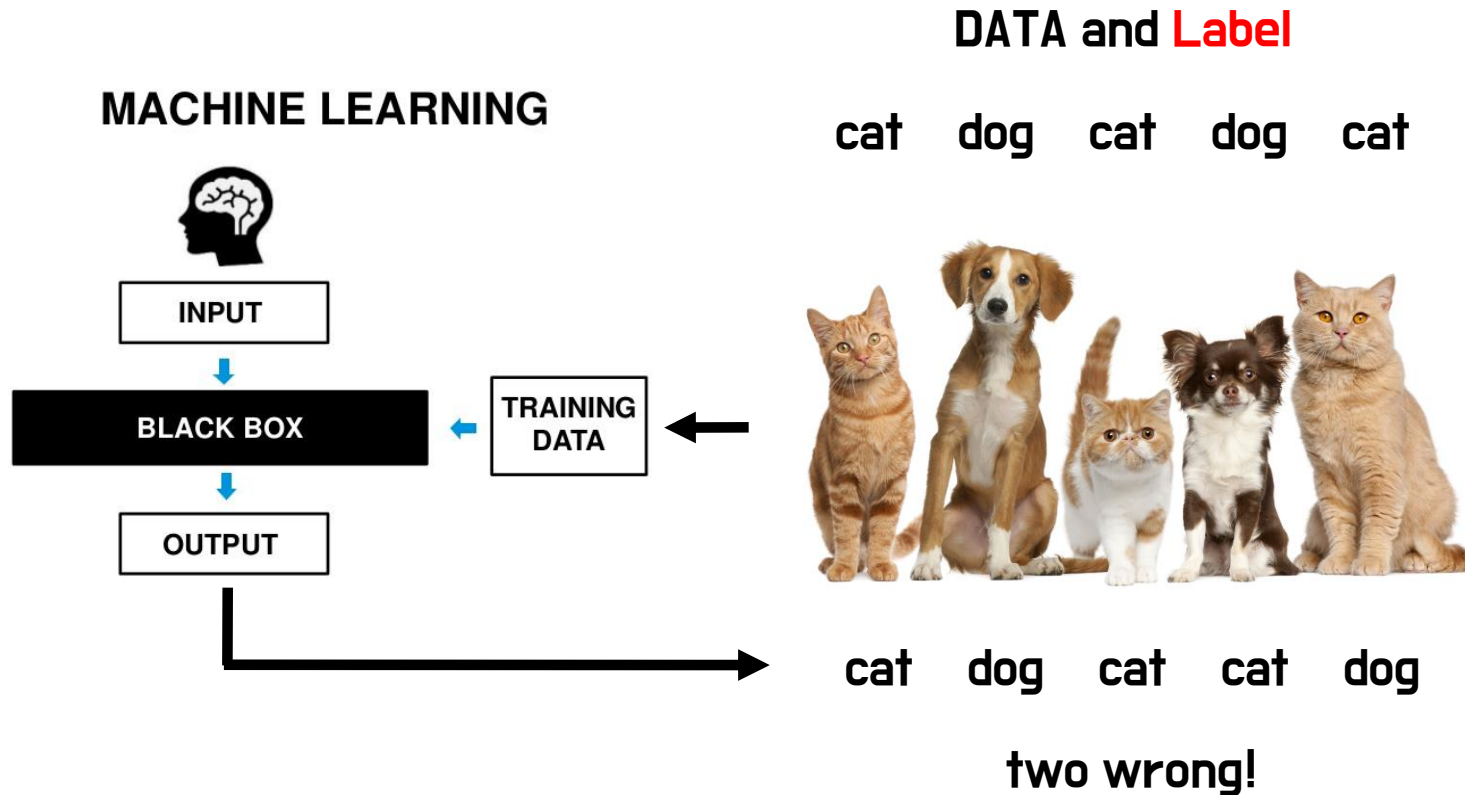

**해결: Data를 통해 Black Box를 학습시켜 올바른 '규칙'을 찾도록 만들자!**

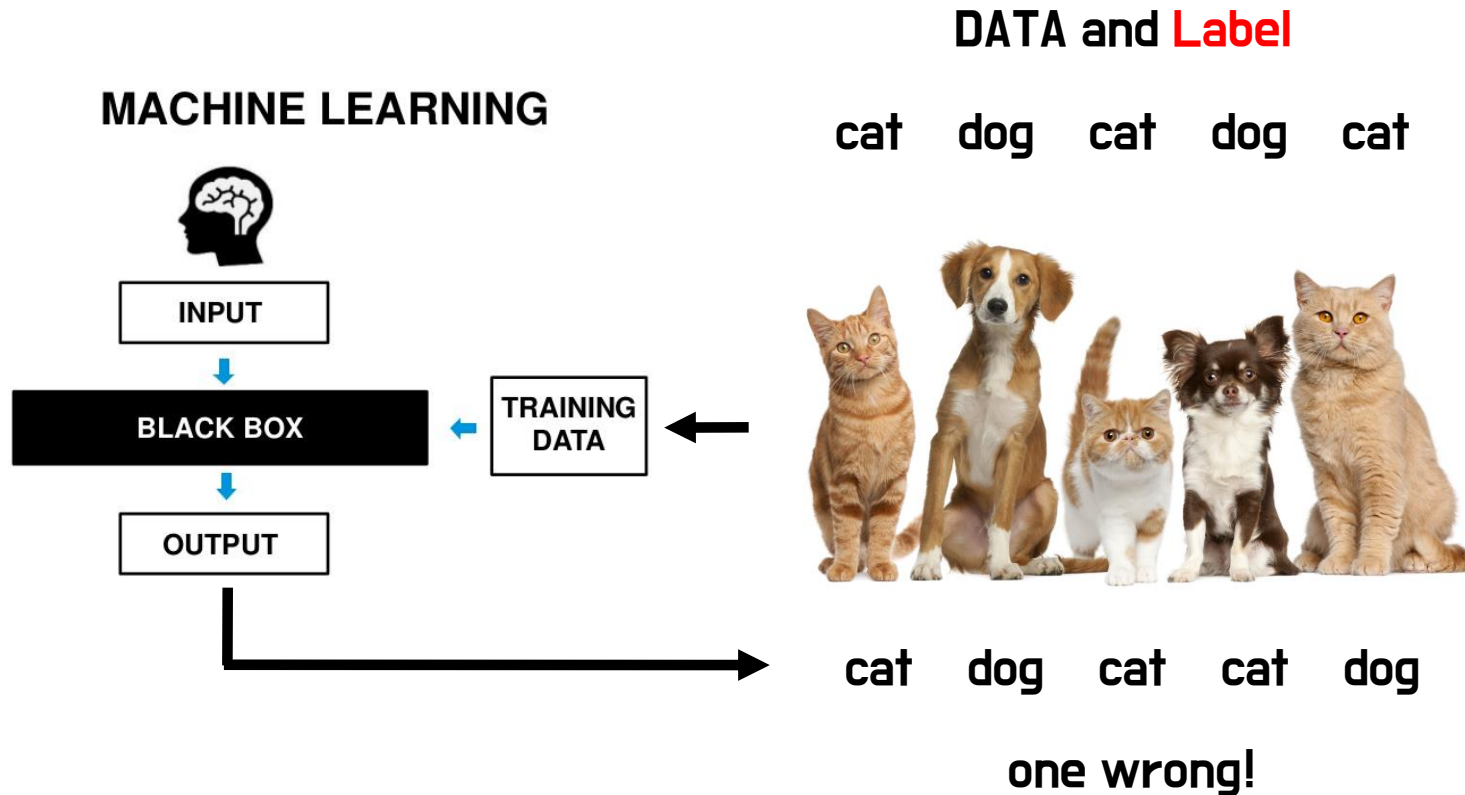

# Machine Learning 의 원리

# Machine Learning 의 원리

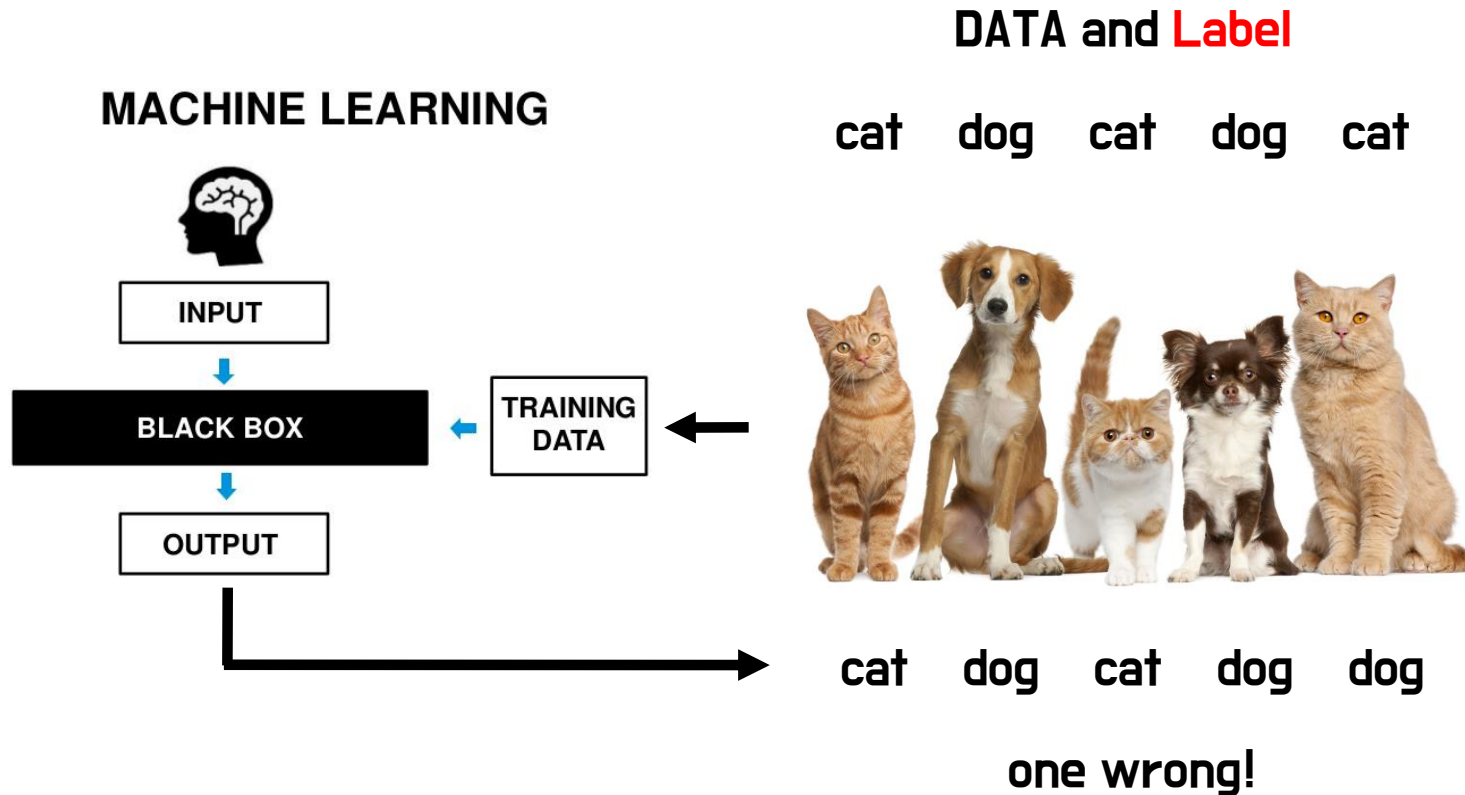

# Machine Learning 의 원리

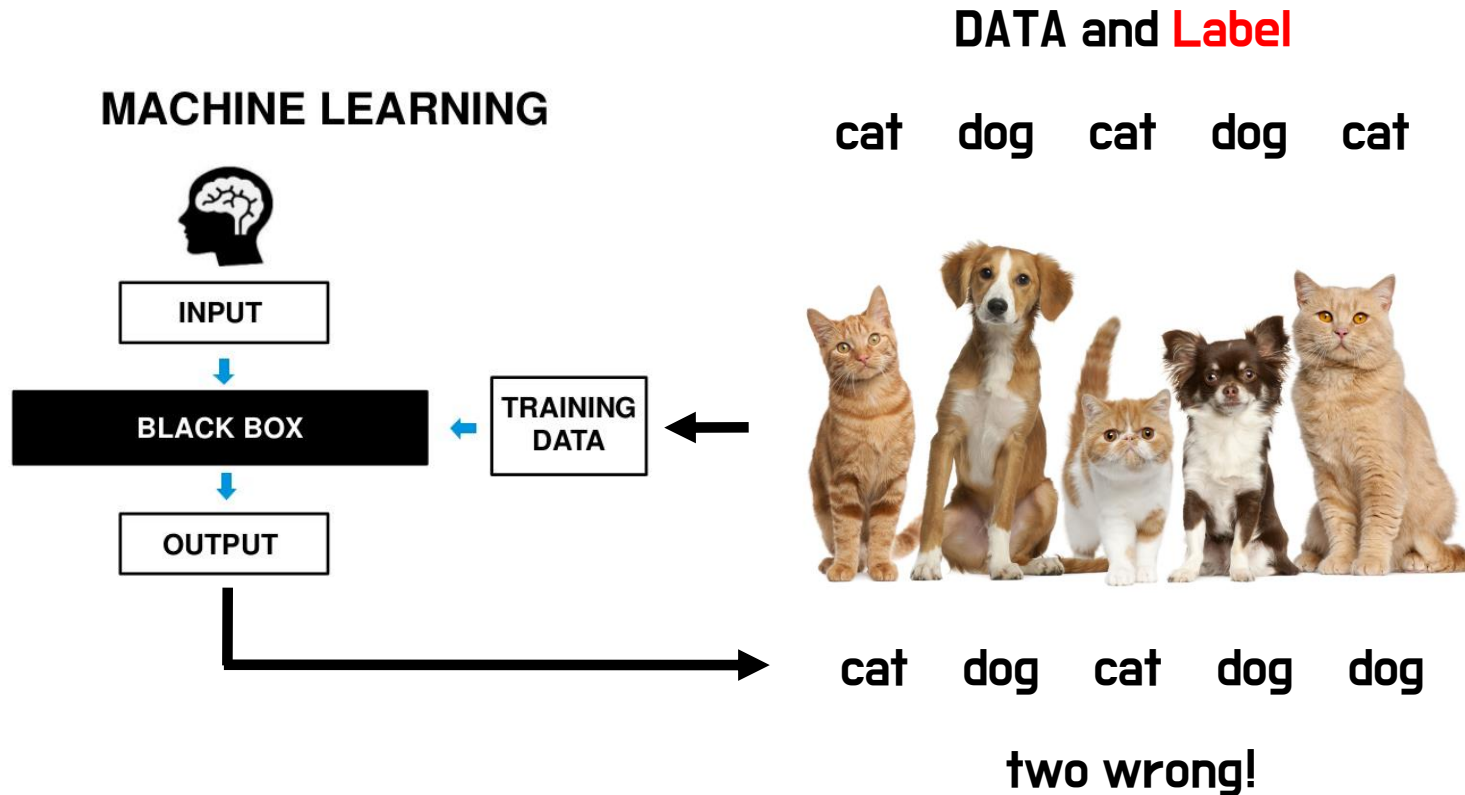

Black Box 내부에서 개와 고양이를 판단하는 규칙을 수정한다

# Machine Learning 의 원리

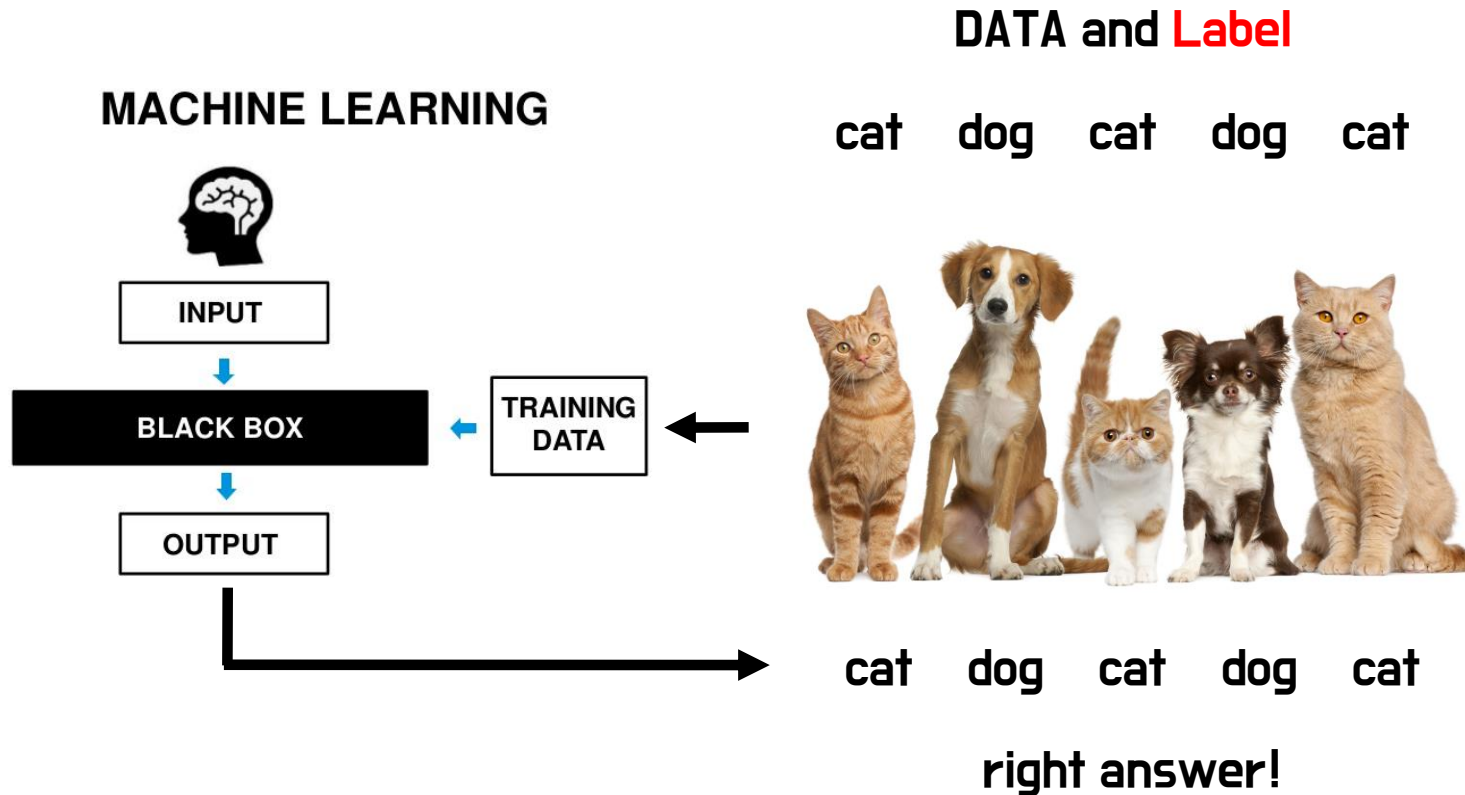

Black Box 내부에서 개와 고양이를 판단하는 규칙을 '계속' 수정한다

# Machine Learning 의 원리

Black Box 내부에서 개와 고양이를 판단하는 규칙을 수정한다

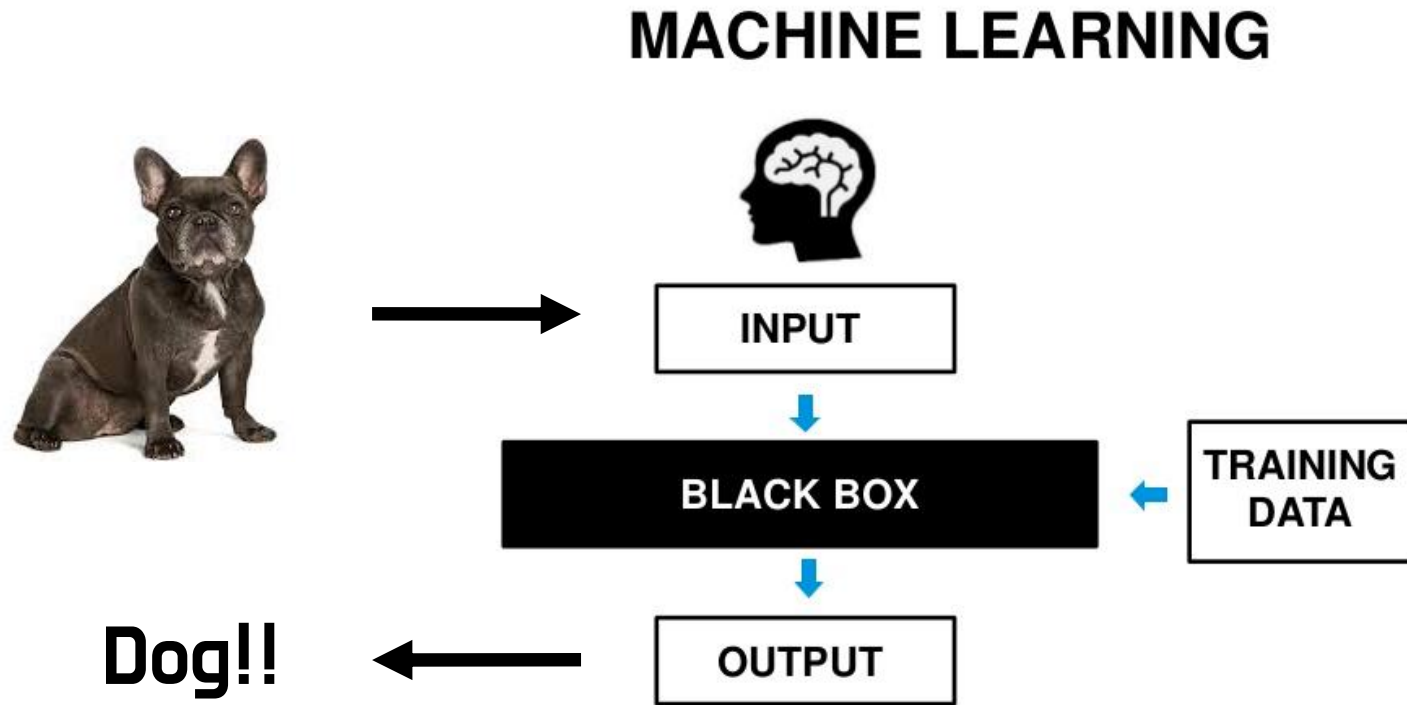

# Machine Learning 의 원리

Black Box 는 학습을 마쳤다!

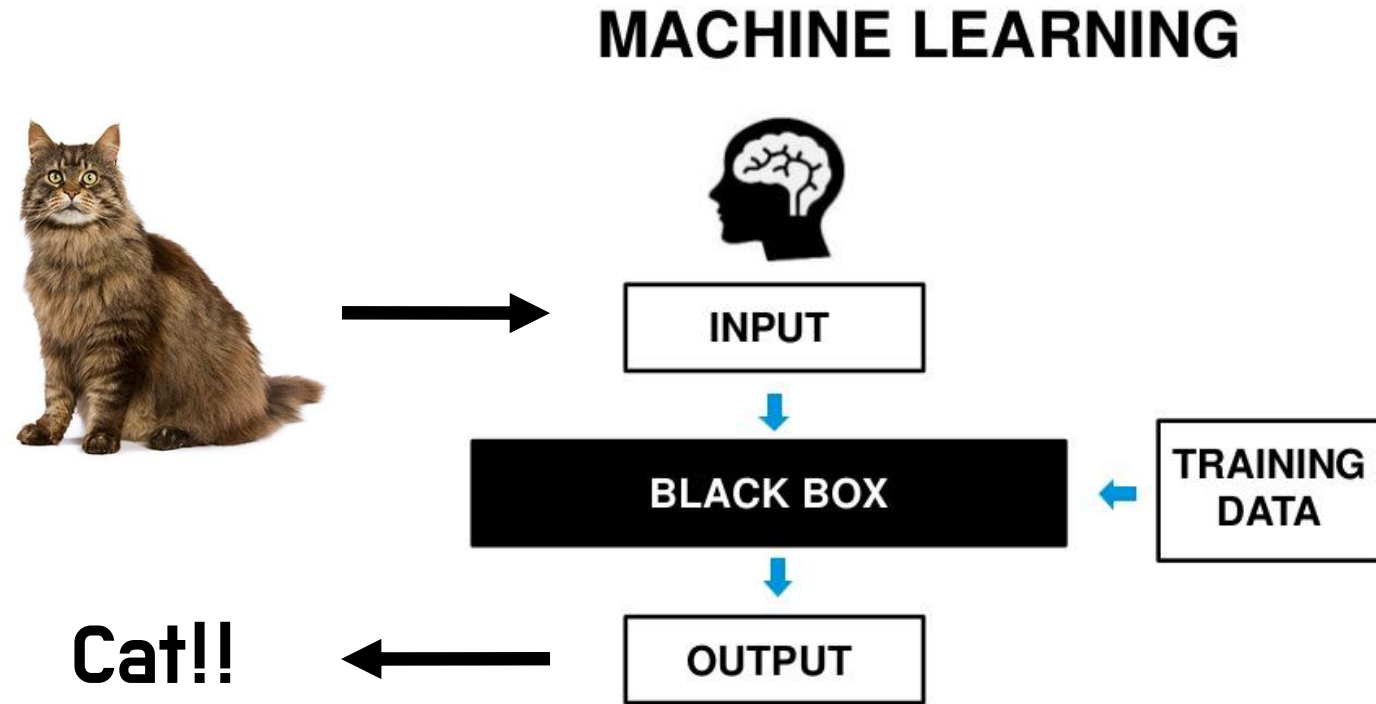

# Machine Learning 의 원리

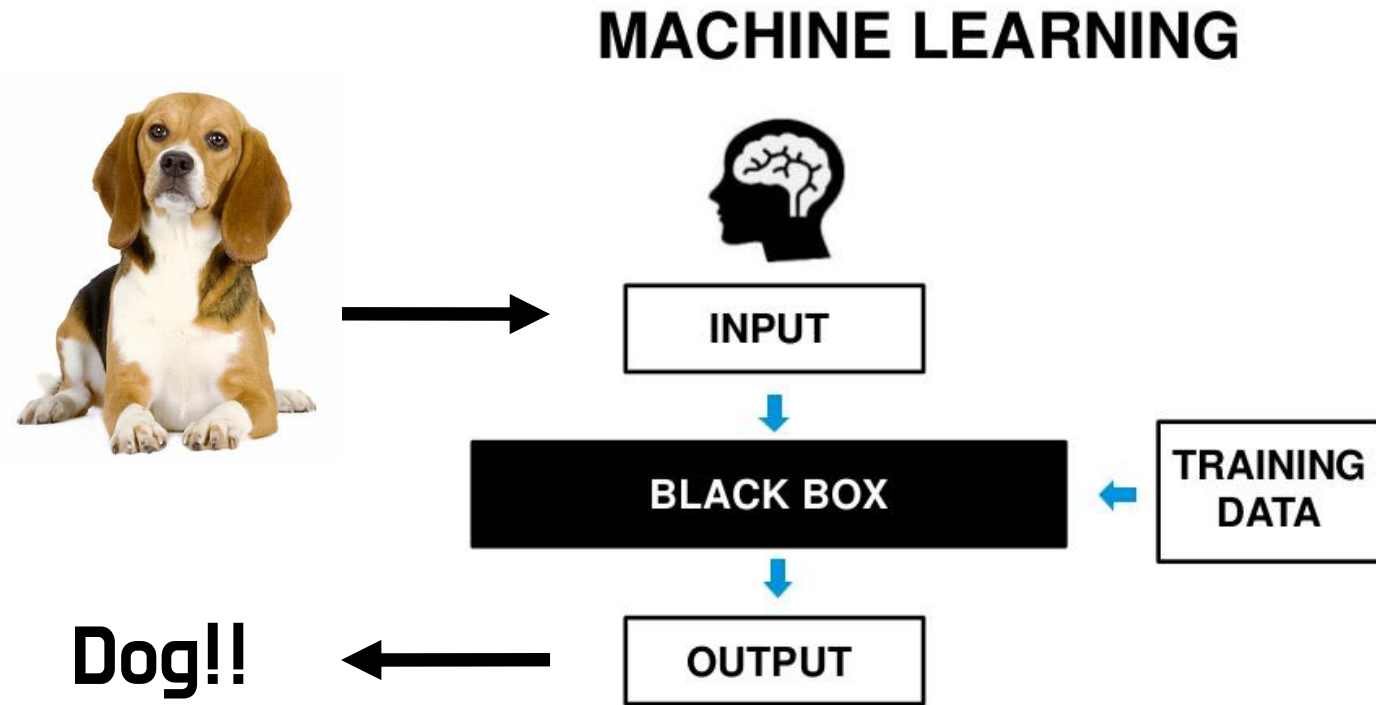

학습한 내용을 바탕으로 올바른 판단을 내릴 수 있게 되었다!

# Machine Learning 의 원리

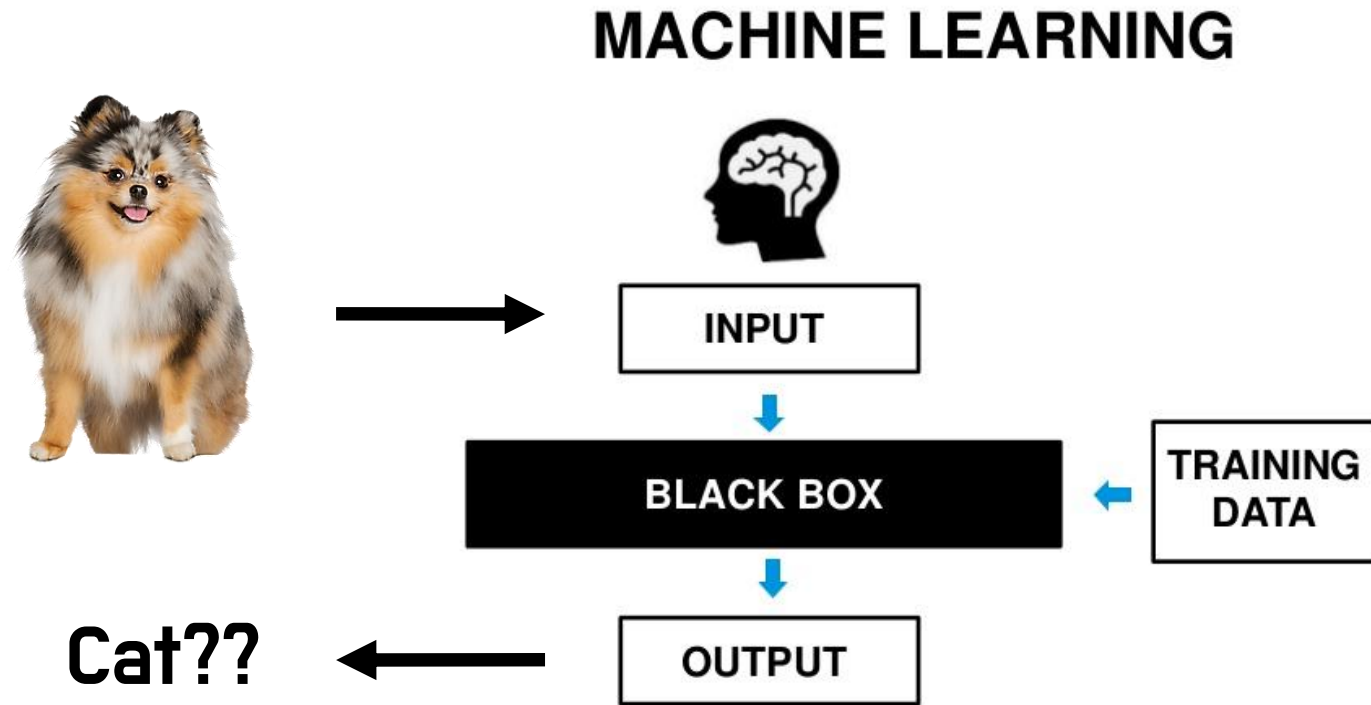

학습한 내용을 바탕으로 올바른 판단을 내릴 수 있게 되었다!

# Machine Learning 의 원리

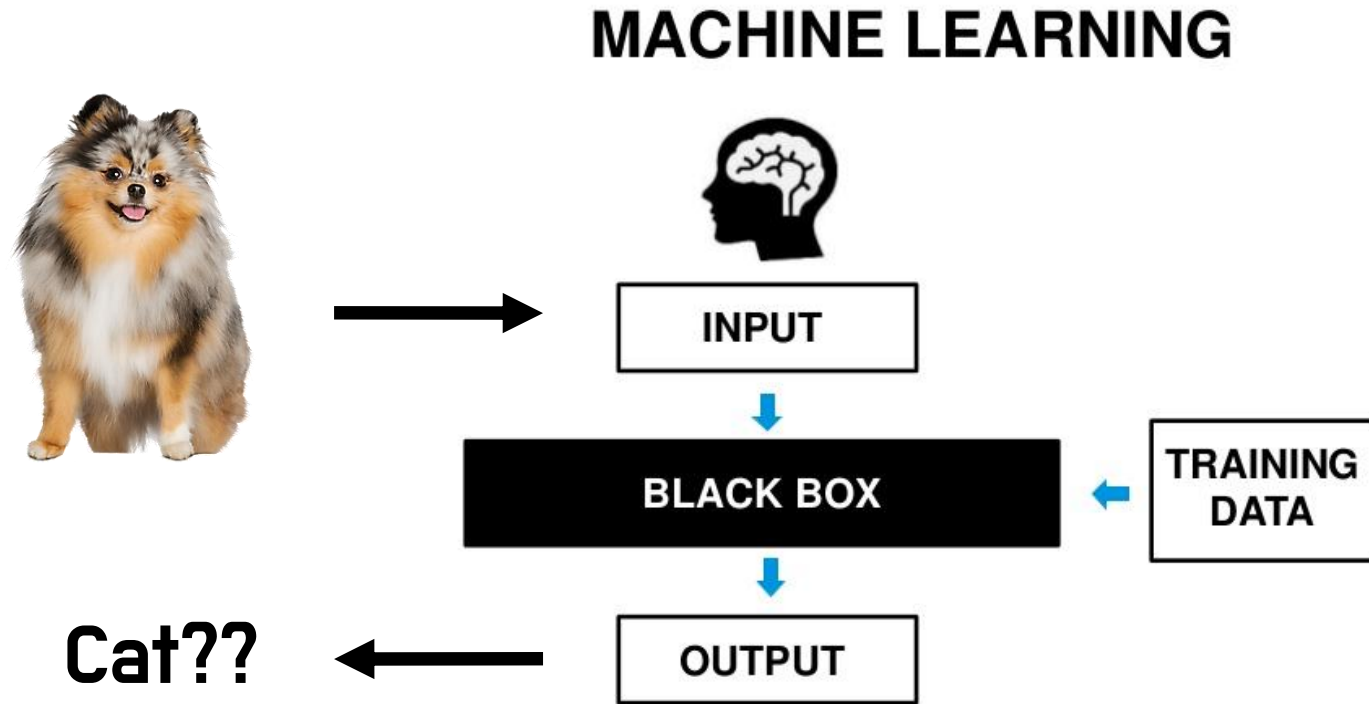

학습한 내용을 바탕으로 올바른 판단을 내릴 수 있게 되었다!

# Machine Learning 의 원리

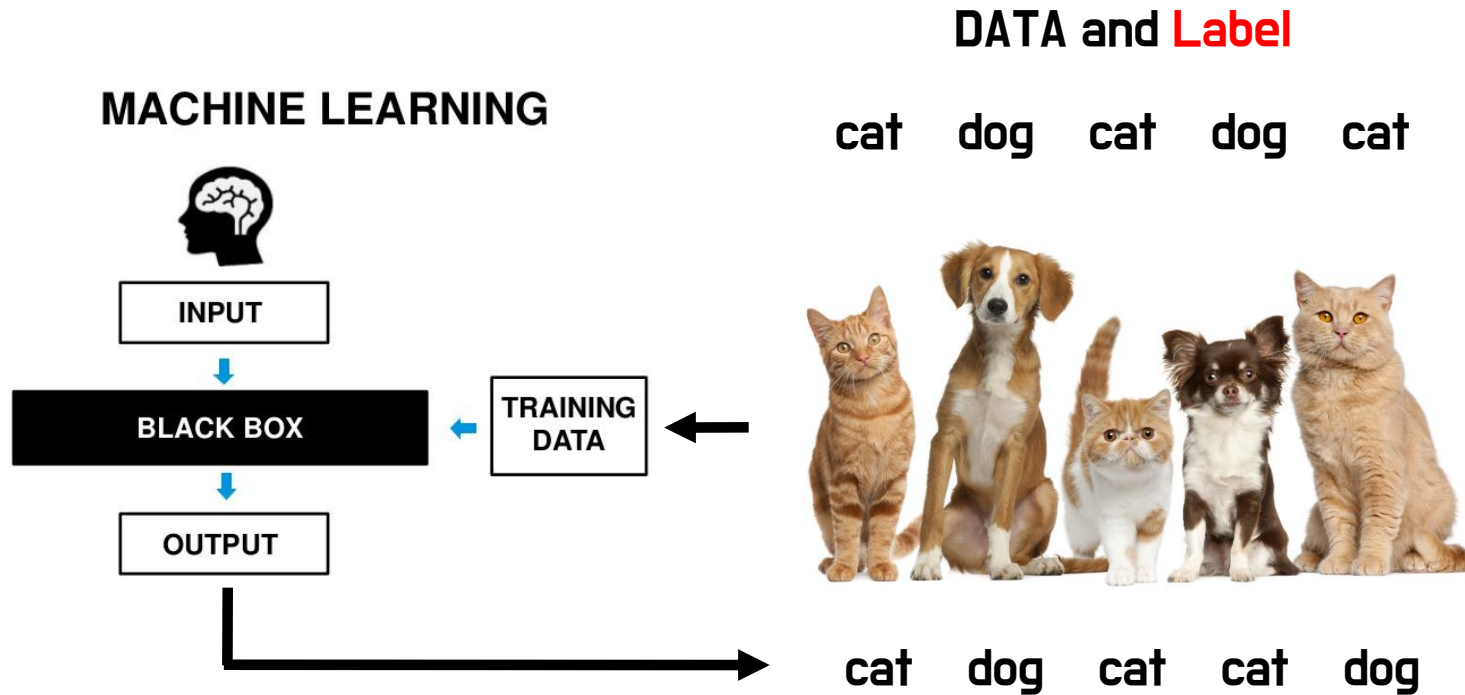

어떠한 사진은 제대로 판단하지 못할 수 있다!  
완전히 강아지와 고양이를 구분하는 규칙을 파악하지 못한 것

# Machine Learning 의 원리

모든 강아지와 고양이를 완전하게 구분하는 규칙을 찾기 위해서는?

# Machine Learning 의 원리

5마리의 개와 고양이 사진으로 모든 규칙을 학습 할 수 있나요?

# Machine Learning 의 원리

5마리의 개와 고양이 사진으로 모든 규칙을 학습 할 수 있나요?

NO

# Machine Learning 과 Data

모든 규칙을 완전히 학습하기 위해서는 엄청나게 많은 훈련 Data가 필요

# Machine Learning 과 Data

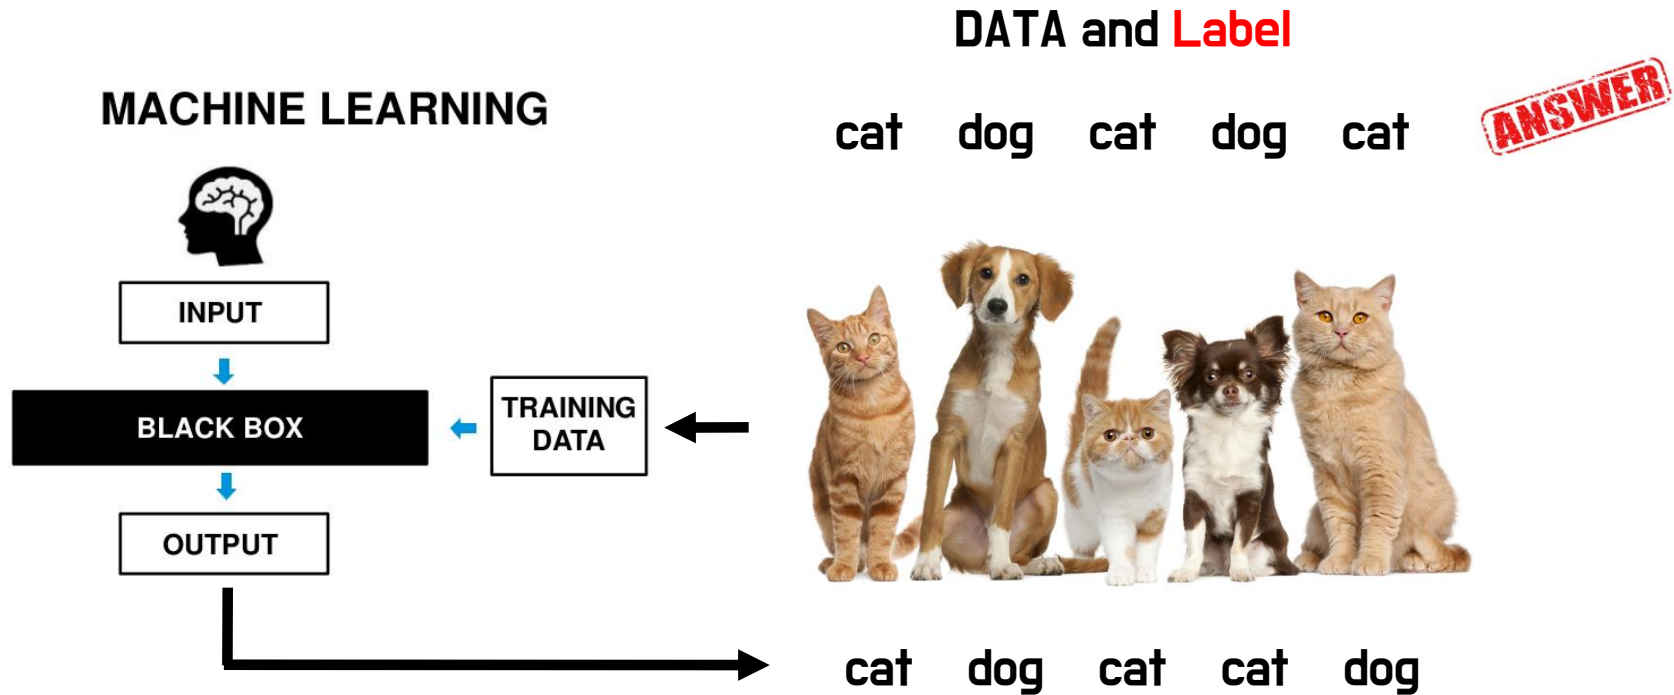

**학습 데이터의 양이 많으면 많을 수록 정확도가 상승!**

# Three Types of Machine Learning

# Supervised Learning

**Supervised Learning:** Learning from labeled data

# Supervised Learning

**Supervised Learning:** Learning from labeled data

## Image Classification

cat dog cat dog cat

**Data:** Pictures **Label:** Classes

# Supervised Learning

**Supervised Learning:** Learning from labeled data

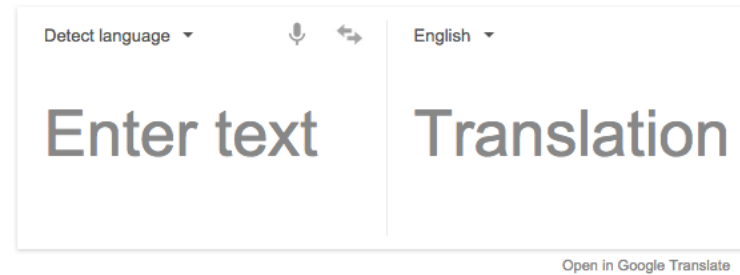

## Object Detection

**Data:** Pictures    **Label:** Boxes & Classes

# Supervised Learning

**Supervised Learning:** Learning from labeled data

The image shows a simplified version of the Google Translate web interface. It features a 'Detect language' dropdown menu on the left and an 'English' dropdown menu on the right. Below these are two large text input areas: 'Enter text' on the left and 'Translation' on the right. At the bottom right, there is a small link that says 'Open in Google Translate'.

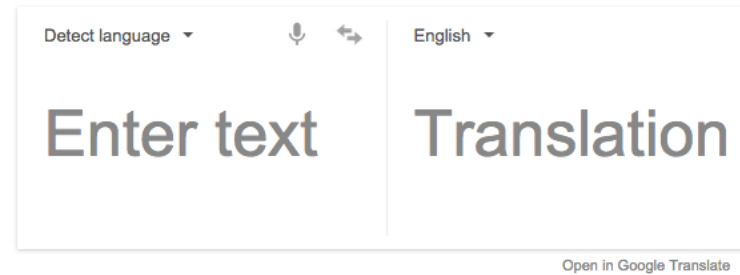

**Machine Translation**

**Data:** 번역 이전의 문장    **Label:** 번역된 문장

**Unsupervised Learning:** Learning from unlabeled data

**Image Generation**

Noise  $\sim N(0,1)$

Generative  
Model

# Reinforcement Learning

**Reinforcement Learning:** Evaluate after action

Game Play

Chatbot

# Reinforcement Learning

**Reinforcement Learning:** Evaluate after action

일단 **Action**을 취한 뒤 **Reward**를 받고 새로운 **State**를 가진다.  
각 State에서 높은 Reward를 받을 수 있는 Action의 확률을 높인다!

# Reinforcement Learning

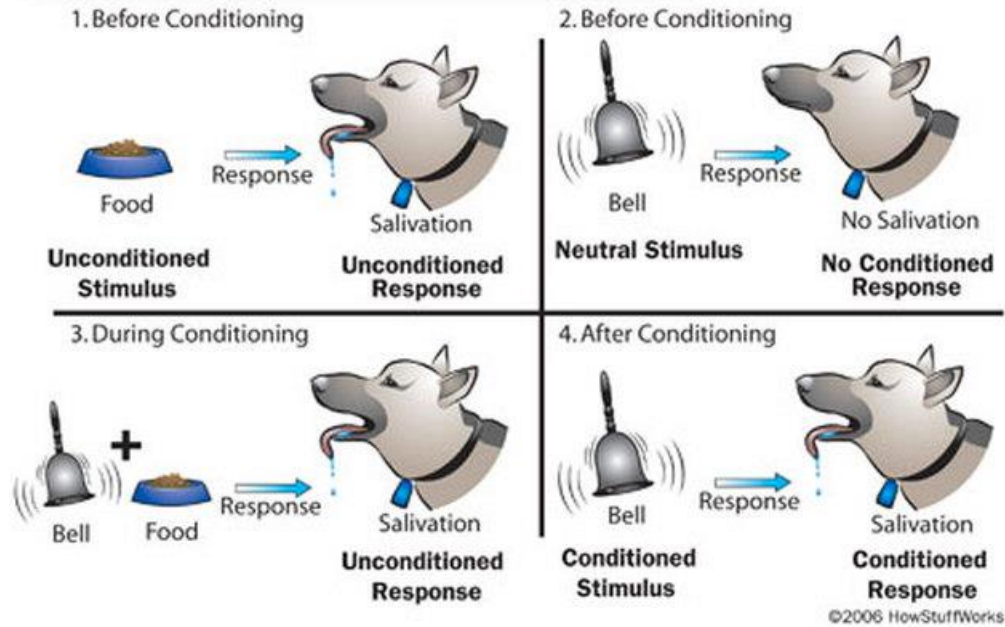

**Reinforcement Learning:** Evaluate after action

일단 **Action**을 취한 뒤 **Reward**를 받고 새로운 **State**를 가진다.  
각 State에서 높은 Reward를 받을 수 있는 Action의 확률을 높인다!

# Reinforcement Learning

## How Dog Training Works

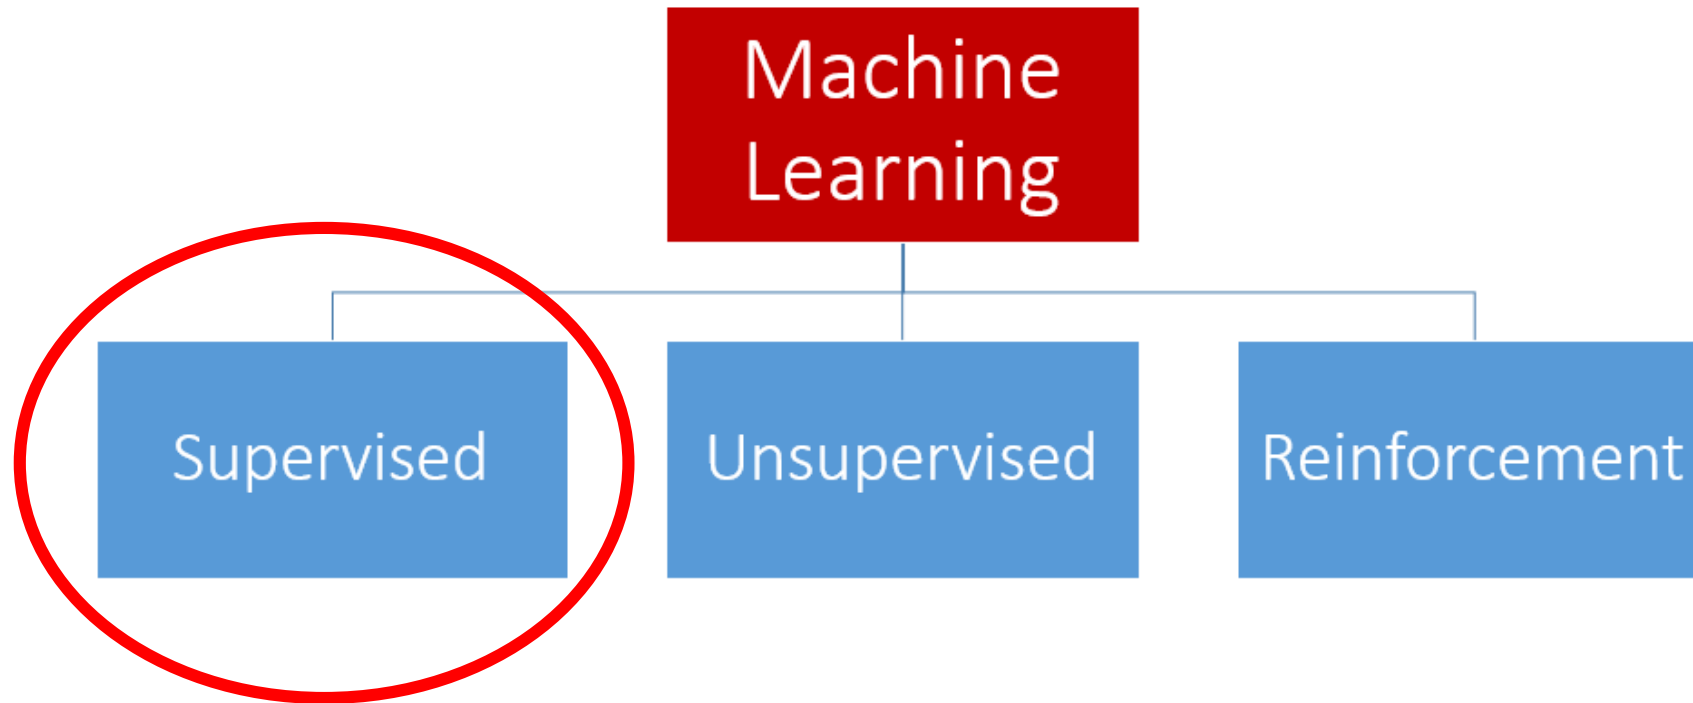

인간/동물의 학습방식과 가장 유사한 학습방식

# Three Types of ML 비교

	Supervised Learning	Unsupervised Learning	Reinforcement Learning
개념	Learning from labeled data	Learning from unlabeled data	Evaluate after Action
적용	Classification Object Detection Machine Translation ...	Clustering Image Generation ...	Game AI Chatbot System ...
기타	대부분의 Machine Learning 사례	-	인간의 학습방식과 가장 유사
국문	지도학습	비지도학습	강화학습

# Focus on Supervised Learning

# Image Classification

# Image Classification

DATA and **Label**

cat   dog   cat   dog   cat

# Image Classification

$$\begin{bmatrix} 6 & 4 & 24 \\ 1 & -9 & 8 \end{bmatrix}$$

2 rows, 3 columns  
2x3 matrix

For Image,  
32x32 image is  
32x32 matrix

# Linear Algebra

$$\begin{bmatrix} 6 & 4 & 24 \\ 1 & -9 & 8 \end{bmatrix}$$

2 **rows**, 3 **columns**  
2x3 **matrix**

$$\begin{bmatrix} 1 \\ -9 \\ 8 \end{bmatrix}$$

We call nx1 or 1xn matrix  
"**vector**"

# Image Classification

$$\begin{bmatrix} 1 \\ -9 \\ 8 \end{bmatrix}$$

vector

For Image,  
32x32 image is  
**1024-size vector**

# Linear Algebra

$$-\begin{bmatrix} 2 & -4 \\ 7 & 10 \end{bmatrix} = \begin{bmatrix} -2 & 4 \\ -7 & -10 \end{bmatrix}$$

negative

$$\begin{bmatrix} 3 & 8 \\ 4 & 6 \end{bmatrix} - \begin{bmatrix} 4 & 0 \\ 1 & -9 \end{bmatrix} = \begin{bmatrix} -1 & 8 \\ 3 & 15 \end{bmatrix}$$

subtracting

The two matrices must  
be the same size.

# Linear Algebra

$$2 \times \begin{bmatrix} 4 & 0 \\ 1 & -9 \end{bmatrix} = \begin{bmatrix} 8 & 0 \\ 2 & -18 \end{bmatrix}$$

**multiply by constant**

**We call the constant a *scalar*,  
so officially this is called "scalar multiplication".**

# Linear Algebra

$$\begin{bmatrix} 6 & 4 & 24 \\ 1 & -9 & 8 \end{bmatrix}^T = \begin{bmatrix} 6 & 1 \\ 4 & -9 \\ 24 & 8 \end{bmatrix}$$

transposing

To "transpose" a matrix, swap the rows and columns.

We put a "T" in the top right-hand corner to mean transpose:

# Linear Algebra

$$A = \begin{bmatrix} a_{1,1} & a_{1,2} & a_{1,3} \\ a_{2,1} & a_{2,2} & a_{2,3} \end{bmatrix}$$

**notation**

**Rows go left-right**

**Columns go up-down**

# Linear Algebra

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \times \begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix} = \begin{bmatrix} 58 & \end{bmatrix}$$

## Matrix Multiplication

The "**Dot Product**" is where we multiply matching members, then sum up:

$$(1, 2, 3) \cdot (7, 9, 11) = 1 \times 7 + 2 \times 9 + 3 \times 11 = 58$$

$A \times B = C$ ,  $c_{ij}$  is dot product of  $i^{\text{th}}$  row of A and  $j^{\text{th}}$  row of B

# Linear Algebra

The diagram illustrates the calculation of the element in the first row and second column of the resulting matrix. It shows the first matrix  $\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix}$  multiplied by the second matrix  $\begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix}$ . A yellow curved arrow connects the first row of the first matrix (1, 2, 3) to the second column of the second matrix (8, 10, 12). Another yellow curved arrow points from this dot product to the element 64 in the resulting matrix  $\begin{bmatrix} 58 & 64 \end{bmatrix}$ . The numbers 1, 2, 3, 8, 10, 12, 58, and 64 are highlighted in yellow.

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \times \begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix} = \begin{bmatrix} 58 & 64 \end{bmatrix}$$

**Matrix Multiplication**

$$(1, 2, 3) \cdot (8, 10, 12) = 1 \times 8 + 2 \times 10 + 3 \times 12 = 64$$

# Linear Algebra

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \times \begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix} = \begin{bmatrix} 58 & 64 \\ 139 & 154 \end{bmatrix} \checkmark$$

## Matrix Multiplication

We can do the same thing for the 2nd row and 1st column:

$$(4, 5, 6) \cdot (7, 9, 11) = 4 \times 7 + 5 \times 9 + 6 \times 11 = 139$$

And for the 2nd row and 2nd column:

$$(4, 5, 6) \cdot (8, 10, 12) = 4 \times 8 + 5 \times 10 + 6 \times 12 = 154$$

# Linear Algebra

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \times \begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix} = \begin{bmatrix} 58 & 64 \\ 139 & 154 \end{bmatrix} \checkmark$$

## Matrix Multiplication

A: 2x3 matrix, B: 3x2 matrix

C=AxB: 2x2 matrix

A:  $n \times m$ , B:  $m \times k$   
C=AxB:  $n \times k$  matrix

# Image Classification

test.py x

```
1 class ImageClassifier:
```

```
2
```

```
3     def train(self, images, labels):
```

```
4         model = ""
```

```
5         # Machine Learning Models!
```

```
6         return model
```

```
7
```

```
8     def predict(self, model, test_images):
```

```
9         test_labels = ""
```

```
10        # Use model to predict labels
```

```
11        return test_labels
```

```
12
```

**train the model**

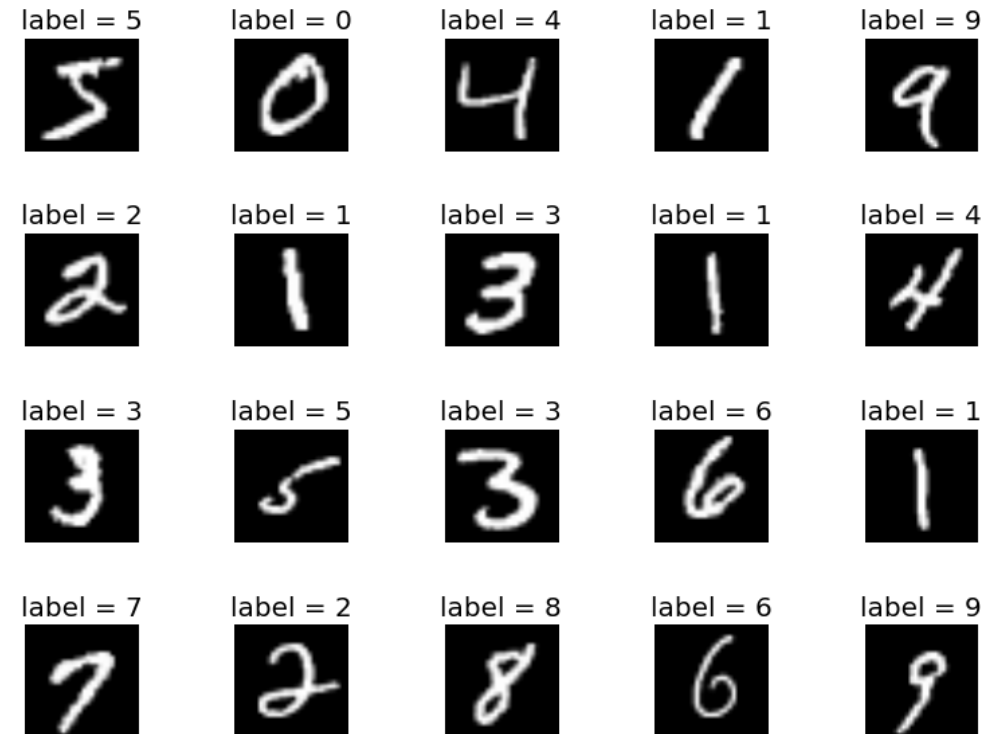

**predict the label from  
trained model!**

**or infer (inference)**

# Popular & Simple Datasets

**CIFAR10**  
32x32x3

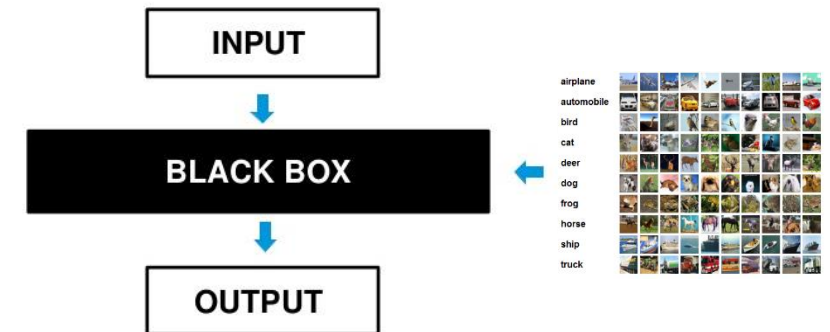

**MNIST**  
28x28x1

# Image Classification with ML

test.py x

```
1  class ImageClassifier:
2
3  def train(self, images, labels):
4      model = ""
5      # Machine Learning Models!
6      return model
7
8  def predict(self, model, test_images):
9      test_labels = ""
10     # Use model to predict labels
11     return test_labels
12
```

← train the model

# Image Classification with ML

test.py x

```
1  class ImageClassifier:
2
3      def train(self, images, labels):
4          model = ""
5          # Machine Learning Models!
6          return model
7
8      def predict(self, model, test_images):
9          test_labels = ""
10         # Use model to predict labels
11         return test_labels
12
```

BLACK BOX

OUTPUT

**predict the label from  
trained model!**

**or infer (inference)**

# Image Classification with ML

```
test.py x
1  class ImageClassifier:
2
3      def train(self, images, labels):
4          model = ""
5          # Machine Learning Models!
6          return model
7
8      def predict(self, model, test_images):
9          test_labels = ""
10         # Use model to predict labels
11         return test_labels
12
```

Then,  
What is **model**? (black box)

# Linear Classifier

model is mathematical function!

Image

Array of 32x32x3 numbers  
(3072 numbers total)

# Linear Classifier

**Linear Classifier**  
 $f(x, W) = Wx$

Image

sess = tf.Session()
```

```
print sess.run(add, feed_dict={a: 2.0, b: 3.0})
```

```
print sess.run(mul, feed_dict={a: 2.0, b: 3.0})
```

A screenshot of a Jupyter Notebook terminal window. The window has a title bar with a Python logo and the text 'hello'. The terminal shows the execution of a Python script. The first line is the command 'python -u /root/shared/he'. The output consists of two lines: '5.0' and '6.0'. At the bottom, a message states 'Process finished with exit code 0'. On the left side of the terminal, there is a vertical toolbar with icons for running, stepping through, and other execution controls.

```
un hello  
f64e4acc8cc2:python -u /root/shared/he  
5.0  
6.0  
Process finished with exit code 0
```

# Tensorflow Practice

training time vs prediction time ?

How about rule-based (algorithmic) classifier?

At service field, prediction(test) time is much more important!

# Deep Learning Library

We can implement this with **pure python code**.

But.. did we compute softmax function ?

gradient ? optimization ?

all of these processes were done by **tensorflow**!

And.. There are other similar **libraries**!
